

## 14 Week Half Marathon Training Plan - Sub 1hr 45 -

This program was developed  
to help runners with moderate  
experience to achieve their goal.

### *General Tips*

#### *Pace*

Run at a pace of 170 – 190 strides per minute.  
This may seem fast but by increasing the number of  
steps per minute you will tend to land more softly  
and cause less stress on your body.

#### *Strong Core*

Strong abs and glutes will keep you running happy.

#### *Hydrate and Fuel Up*

Snack after your run: 500ml chocolate milk within  
30 minutes post run. Meals before competition:  
pasta and chicken up to 3 days prior.

#### *Get out!*

Run as often as possible up to 5-6 days a week.  
It is preferable to run shorter distances often  
rather than 2-3 longer and/or more intense runs.

#### *Find a Trail*

When possible, choose a cross-country surface  
(firm and irregular). If pain occurs, see a physiotherapist  
specialised in sport and/or running without delay.

### *Cross Train*

Complement your training  
with swimming, cycling, yoga  
or pilates to optimise your  
strength, flexibility and level  
of fitness.

Join a running group  
for increased motivation!

### *Rest*

After an intensive training session  
ensure you give your body time  
to recover and repair before  
your next run.

This training plan was designed  
by Jessica Chenier-Britton,  
a Physiotherapist  
and running specialist.

#### Medical Disclaimer:

Always consult your doctor before beginning any  
exercise program. If you experience any pain or difficult  
with this exercise program, stop and consult your doctor.

# Training Plan Guide

To complete this training plan successfully and injury free it is important to follow these guidelines

## Warm up/Cool down

Before a run it is essential to warm up, so that you don't strain yourself or pull a muscle.

## Pace

R1 5 min 30 sec per km (You should be able to talk while running at this pace)

R2 running 5 min 00 sec per km

R3 running 4 min 30 sec per km

- You will be able to adjust your training after the 10 km run in week 3.  
If you can easily maintain the pace of 4min:30sec/km, you may increase your training pace slightly.
- You will also be able to adjust your training after the 21 km run in week 8. If you can easily maintain the pace of 5min per km, you may increase your training pace slightly.

If you cannot maintain the pace, you need to slow down the training pace.

## Stretch

Stretching helps to have a good range of motion in the joints and length in the muscles. Only stretch after a run when muscles are warm.

## Cross train

Doing another Kind of fitness work out such as swimming, Pilates cycling or yoga

## Keep it fun!

Most people push too hard, run too fast, too long or increase the training volume too fast.

## Rest

There is no benefit in going for a run if you are sick or injured. Taking a few days off from a training programme is better than been forced to stop for months due to injury.
